Aims of this workshop

For botanicals & semiochemicals, we have to ...

- > **identify risks** (discriminate perceived & real risks)
- > **review risk assessment methods**
(compare current practice in selected countries, relate to risks)
- > **suggest possible improvements**
as a basis for workshop 9 (spring 2007)

Structure of this workshop

Analyze risks and current risk assessment methods

- > ... for botanicals**
- > ... for semiochemicals**

Suggest improvements (working groups)

Working groups (tomorrow)

There will be three working groups:

- > **Botanicals (& other low-risk substances)**
- > **Semiochemicals**
- > **Administrative improvements**

Please think about which group you want to join!

Output

> **We need an output in writing**

> **Presentations**

Preferably, you send an abstract. Otherwise, we will use our minutes and let you check them.

> **Working groups**

The leaders of the working groups should prepare a short report, which will be checked by the members of the group.

Who is here?

different stakeholders

> regulators / applicants / research & other

public sector

private sector

different expertise

> botanicals / semiochemicals / other & generalists
